

# Case Study: Morrisons Manufacturing Changing Rooms

## Project:

To design, manufacture and install wash / changing room equipment at a large food production facility.

Unitech Engineering were awarded a contract by a food production facility owned by Morrisons Manufacturing Worsley to supply and install changing room facilities at their greater Manchester site.

We were tasked with equipping an area to provide a barrier between the low care changing area and high care changing, offering a more hygienic and organised method of storing outside shoes in a locker bench whilst also increasing the overall capacity by 33% on the wellington boot storage, offering both secure lockable as well as non secure racks. Equipment supplied included floor mounted welly racks, secure and non-secure, multipurpose PPE dispensers, garment lockers, garment collectors, apron roll dispensers, bespoke step over shoe storage barrier benches to fit between wall kerbs and vertical posts and full length polished mirrors.

Sales Manager Ed Youngman, who looked after the project, said “despite the difficulties encountered due to the short time scale requested by our client to complete the job and the narrow window to fit the equipment in-between shifts, our client has been very impressed with our service and attention to detail to the point of placing an order for a further changing room to be equipped.”
